PHAN NGỌC HÒA

Software Engineering Intern / Junior Software Developer

Ho Chi Minh City, Vietnam | hoap43431@gmail.com | GitHub | Portfolio

PROFILE

Information technology undergraduate building full-stack and cross-platform applications. I work with Python and FastAPI on backend services, and with Flutter and React on client applications. My projects cover media playback, background processing, and AI-assisted data analysis.

TECHNICAL SKILLS

Languages Python, Java, TypeScript, Dart

Frameworks and tools FastAPI, Flutter, React, LangGraph, LangChain, SQLAlchemy, Docker, GitHub Actions

Databases PostgreSQL, SQLite, Supabase

PROJECTS

Neatie | Music Discovery and Playback for Web and Android

Flutter, FastAPI, Supabase, SQLite, Docker | Source | Live demo

- Built Flutter clients on a shared FastAPI backend for music search, playback queues, and cloud playlists.
- Moved personalized feed preparation to a background worker and implemented cached audio delivery and upcoming-track preparation to reduce playback delays.
- Added diagnostics that trace playback from track selection to audio start, and configured GitHub Actions checks for the backend, Flutter client, and web build.

Quorvix (Data-Insight) | AI-Assisted Data Analysis Platform

React, TypeScript, FastAPI, PostgreSQL, LangGraph, LangChain | Source

- Built a React and FastAPI application that profiles uploaded datasets, flags data quality issues, and generates analysis reports.
- Orchestrated a LangGraph workflow that delegates analysis, runs generated Python in an E2B sandbox, and validates the results before reporting.
- Combined statistical and semantic profiling to detect anomalies, distribution shifts, and relationships across datasets.

EDUCATION

Nong Lam University | Ho Chi Minh City, Vietnam

Undergraduate studies in Information Technology | 2022 - Present

PUBLIC SPEAKING AND LANGUAGES

TEDx speaker | TEDxYouth@IGCSchoolTBD

Ensuring Energy-Efficient Networks With AI

English Proficient
